LAWN SEED Buffalo grass *Stenotaphrum secundatum*.
Indigenous to the coastal areas of South Africa.
The grass is a very strong lawn with coarse textured and broad leaves.
Buffalo lawn has a beautiful deep green colour and is slow growing and therefore has a reputation of being a low maintenance product.

Despite this container serving to prolong the life of the seed, it should not be exposed to unduly high temperatures.
Once the container has been torn open, deterioration of the seed will ensue at the usual rate.
