Lawn Fertiliser /
Grasperkunsmiss

50g / m² – 4 x PER YEAR / JAAR

LAWN SEED SHADE-OVER®
Shade is the major cause of bare patches in lawns, because most lawns in South Africa are Kikuyu or Cynodons which do not thrive in shade. Shade-Over® is a blend of grasses adapted to shade conditions and if mown to the correct height (see instructions) thrives year after year.

Please note that this TOP-UP PAK contains enough seed to establish 2.5 m² of shade lawn. It is specifically designed to fill in any gaps that were missed at the initial establishment, or to top-up a thinning stand.

IMPORTANT: Sowing rates should be adhered to as SHADE-OVER® does not creep.
