**LAWN SEED SHADE-OVER®**  
Shade is the major cause of bare patches in lawns, because most lawns in South Africa are Kikuyu or Cynodons which do not thrive in shade. Shade-Over® is a blend of grasses adapted to shade conditions and if mown to the correct height (see instructions) thrives year after year.

Please note that this **TOP-UP PAK** contains enough seed to establish 2.5 m<sup>2</sup> of shade lawn. It is specifically designed to fill in any gaps that were missed at the initial establishment, or to top-up a thinning stand.

**IMPORTANT:** Sowing rates should be adhered to as **SHADE-OVER®** does not creep.
