

Biososome™

ECO-MATCHED INDIGENOUS GRASS SEED MIXES

**BIOSOSOME™ IS THE
SOLUTION FOR YOU**

WINTER COVER CROP SEED MIX

- Excellent winter forage
- Improves year-round grazing potential
- Biome specific
- Enhances soil ecology

Supplying high quality year-round grazing for your livestock, and keeping your land as productive as possible, is becoming more challenging year on year.

BIOSOSOME™ WINTER COVER CROP SEED MIX

A biome specific cover crop pasture seed mix which benefits the ecosystem through soil condition improvement throughout its growing season and ecological enrichment of degraded environments.

- Suitable for all designated biomes across South Africa
- Variety of carefully selected, highly productive forage species that thrive in all climatic conditions
- Enhances annual grazing production through the lean periods of the year
- Does not compromise the performance of underlying perennial pasture in its growing season

WHY BIOSOSOME™?

- Highly effective annual cover crop for winter grazing to complement perennial pastures
- Adapts easily to ambient climatic conditions
- Environmentally friendly
- No fertiliser required
- Very resilient and stress tolerant
- Works in harmony with the species in our Biososome™ Eco-matched Perennial Veld Grass Range

FEATURES

- Thrives in harsh climates
- Provides excellent grazing outside of the growing season of the existing / underlying pasture
- Works in symbiosis with perennial grasses
- Restores soil ecological health
- Combats erosion & reduces surface water runoff

THE RESULT

- Fills the winter and early spring gap to provide a year-round high productive veld grazing solution
- Maximises annual profitability per hectare
- Improves long-term soil health and carrying capacity

MayFord

MAKE YOUR WINTER AND EARLY SPRING GRAZING STRESS A THING OF THE PAST

SUITED FOR A RANGE OF APPLICATIONS

WINTER GRAZING

- Cool season species mix with excellent grazing potential
- Annual mix which is interseeded into existing veld and pasture to optimise productivity in winter and early spring months
- High species diversity promotes a more resilient pasture
- Improves soil ecology and microbial activity during its growing season

ANNUAL COVER CROPS

- Ideal for restoring rested cropland out of season
- Boosts organic content in the soil
- Provides ideal environment for microbes
- Supports and promotes natural nutrient cycling
- No legumes or crucifae which tend to attract or host pests and diseases

WE HAVE A MIX SPECIFIC TO YOUR NEEDS

- Sweet and Mixed Bushveld**
Savanna areas with summer rainfall averaging between 250 and 625 mm per year
- Sour Bushveld**
Savanna areas with summer rainfall averaging in excess of 625 mm per year
- Grassveld**
Grassland areas of the central plateau and escarpment, the interior of the Eastern Cape and KwaZuluNatal provinces
- Fynbos**
Winter rainfall macchia biome and cleared, eroded and trampled out sites in the adjacent ticket and forest areas
- Karoo**
Succulent and Nama Karoo biomes
